

FLAHERTY & CRUMRINE PREFERRED INCOME OPPORTUNITY FUND

To the Shareholders of the Flaherty & Crumrine Preferred Income Opportunity Fund (“PFO”):

The first fiscal quarter of 2006 was a mixed bag for PFO. On the plus side, for the three-month period ended February 28, 2006, the Fund produced a total return on net asset value of **+3.7%**. Despite this strong investment performance, net income available to shareholders has declined, and the Fund reduced its monthly dividend by 7.8% (from \$0.0705/share to \$0.065/share), beginning with the March distribution. The focus of the Fund is income, so the decision to reduce the dividend was difficult, but necessary.

The total return calculation mentioned above has two basic components—net income earned and the change in principal value. Recently, the latter has done well while the former has come under some pressure.

Net income earned, the amount of investment income left over after payment on the Fund’s Money Market Preferred (“MMP[®]”) shares and other expenses, is what the Fund can pay out in monthly distributions to common shareholders. Although investment income has increased recently, payments to MMP[®] shares have risen at a faster pace. As a result, the Fund could not continue to distribute common dividends at the same rate.

The MMP[®] rate is closely correlated to other short-term interest rates, all of which have moved up in concert with the Federal Reserve’s efforts to influence the pace of economic activity. The MMP[®] rate has risen from a low of 1.05% in May 2004 to 3.70% in March 2006. Despite this jump in rates, the use of MMP[®] leverage continues to add incremental income for common shares because the money we obtain from leverage is being invested in securities with much higher yields.

The other component of total return, principal change, normally is not distributed to common shareholders, but instead is reflected by changes in the Fund’s net asset value. During the fiscal period, the Fund’s NAV rose 2.0%.

One last comment on total return—whatever the breakdown between net income and principal change, the entire amount belongs to common shareholders. In addition, the two tend to “merge” over time. For example, if principal value increases and the Fund can realize gains, the Fund will have more money to invest and can generate additional income. Or, shareholders can use the income they receive to purchase additional shares via the Dividend Reinvestment Plan to increase the value of their investment.

As readers may recall from previous discussions of market conditions, the preferred securities market has two main segments—issues that pay dividends and those that pay interest. We refer to the first type as “traditional” preferred stock and the second as “hybrid” preferred securities.

Investor demand for traditional preferred stock has been consistently strong for some time now; however new issue supply has not kept up—during the last fiscal quarter there were only two new issues, totaling a meager \$300 million. As a result of this imbalance, this segment has slowly and steadily outperformed other types of fixed-income securities. The solid performance of PFO reflects the portfolio’s emphasis on traditional preferred stock.

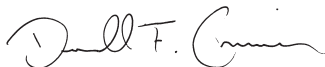

Although demand for hybrid securities has also been strong for some time, the supply of new hybrid preferred has greatly exceeded the supply of traditional preferred. During the period there were thirty new hybrid issues with a market value of \$13.2 *billion*. As expected, many of these new issues were structured like the “ECAP” issues we discussed in our last letter (and on the Fund’s website). Even with this sizable amount of new supply, the performance of this segment kept pace with most other types of fixed-income securities during the quarter.

Many of the recent hybrid preferred securities have terms and features that require very close scrutiny. While the basic structure of the enhanced capital security is now fairly well established, with each new issue we are observing small but important differences. This evolutionary process is typical of new structures—our job is to dissect each issue until we fully understand every twist and turn.

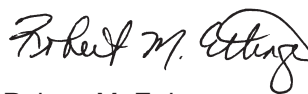

The Fund's hedge positions are intended to provide shareholders with some protection against significant increases in long-term interest rates. Over the course of the fiscal quarter, long-term interest rates barely moved, so the hedging strategy had little impact on the Fund's performance. The Fund's hedging strategy did benefit from the "flat" U.S. Treasury yield curve, since the cost of our hedges tends to be lower in this environment.

We hope investors will take advantage of the Fund's website, www.preferredincome.com. It contains a wide range of useful and up-to-date information about the Fund. In addition, some of the topics mentioned above are analyzed in greater depth in the Frequently Asked Questions section of the website.

Sincerely,

Donald F. Crumrine
Chairman of the Board

Robert M. Ettinger
President
