

FLAHERTY & CRUMRINE PREFERRED INCOME OPPORTUNITY FUND

To the Shareholders of the Flaherty & Crumrine Preferred Income Opportunity Fund (“PFO”):

During the Fund’s 3rd fiscal quarter, the economy slowed from its rapid growth earlier in the year and, for the first time in two years, the Federal Reserve paused in its ratcheting up of short-term interest rates. In this environment, the Fund performed very well, earning a total return of +3.0% on its net asset value (NAV) in the three months ended August 31st and +5.2% over its fiscal year-to-date.

In a reversal of the weak markets for Treasury securities earlier in the year, when the Fund’s hedging strategies contributed significantly to results, long-term interest rates declined during the recent fiscal quarter and the interest-rate hedge proved unnecessary. However, as always, we follow the Fund’s investment strategy of maintaining the hedge in place, while attempting to control its cost. Doing so helps protect the value of the Fund’s holdings against significant increases in long-term interest rates and potentially results in an increase in the Fund’s distributable income. During the recent fiscal quarter, the Fund’s NAV performed very well, even after absorbing the cost of the hedge.

Conditions in the market for preferred securities continue to be positive. This market is somewhat amorphous, so we find it useful to break it down into smaller groups of similarly-structured issues. The market for traditional preferred *stock* (issues that pay dividends and may have tax advantages to certain investors which the Fund can pass through to its shareholders) has been delivering strong relative returns for some time. As of August 31st, this type of security comprised 63% of the Fund’s portfolio.

Since the beginning of 2006, fourteen new traditional preferred stock issues totaling \$5.7 billion have been brought to market (increasing the sector total by roughly 10%); the additional supply has helped focus interest on traditional preferred stock and appears to have attracted new investors. Several of these recent issues have dividend rates that adjust every quarter to reflect changes in short-term interest rates. This floating-rate feature fits the Fund nicely because it tends to offset changes in the cost of the Fund’s leverage and requires only a minimal interest-rate hedge. However, unless the level of income we can earn on this type of security goes up, we don’t anticipate increasing the Fund’s holdings much beyond present levels.

The other major category of the preferred market is the fully taxable or “hybrid” preferred. Income from these issues is taxed as ordinary income to investors and is a deductible expense to the issuer. Taxable preferred securities comprise the lion’s share of the preferred market, and the segment continues to grow rapidly. Over \$24 billion of new taxable preferred securities have come to market in 2006. As of August 31st, 31% of the Fund’s portfolio was invested in fully-taxable preferred securities.

Much of the recent growth in taxable preferred securities has come from issuance of “enhanced” preferreds. These issues have certain terms and conditions which may result in better credit ratings for the issuer (which in turn helps keep their borrowing costs down). Since most of these features favor the issuer, investors should require a higher return. In our view, too often this is not the case. As a result, the portfolio’s allocation to enhanced preferreds has increased at a much slower pace than that of the overall market.

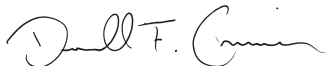

While changes in short-term interest rates affect the valuation of some of the Fund’s securities (and therefore its NAV), short-term rates more directly affect the Fund’s income and the amount of its dividend by influencing both the cost of its Money Market Preferred™ Stock (MMP®) leverage and its hedging strategy. The Fund’s leverage generally produces additional distributable income for its Common Stock shareholders. The amount of this additional income is influenced by the “spread” between the income generated by the portfolio and the cost of leverage.

As the Fed increased short-term interest rates through June 2006, these spreads narrowed significantly and the Fund generated less additional distributable income. If the Fed maintains its pause on short-term rates, and long-term rates do not decrease materially, the Fund's leverage should continue to produce the same additional distributable income as it does now. Of course, if the Fed lowers short-term interest rates, the Fund should see a greater benefit from its use of leverage and consequently have more additional distributable income for its Common Stock shareholders.

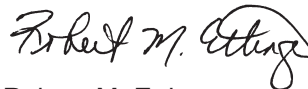

The cost of the Fund's hedging strategy is also directly affected by the slope of the yield curve (in other words, the difference between short- and long-term interest rates). When the yield curve is steep – as it was for most of the period from mid-2001 through 2004 – hedging tends to be expensive, because the market charges the difference between long- and short-term yields to those hedging. However, if the slope of the yield curve is as flat as it has been this year, the market will not charge as much to hedge and the Fund should not need to spend as much on its hedging strategy as it has over the past few years.

We hope investors will take advantage of the Fund's website, www.preferredincome.com. On it, there is a more extensive discussion of enhanced hybrid preferred securities, the impact of changing short-term interest rates on the additional distributable income provided by the Fund's leverage and how the slope of the yield curve affects the cost of the Fund's hedging strategy. It also contains a wide range of additional information about the Fund.

Sincerely,

Donald F. Crumrine
Chairman of the Board

Robert M. Ettinger
President
